

User-Driven Document Creation through the Silvervine and GhostDraft Integration

Create everything you need in-house to bring a new product to market faster, and do it all from inside the Silvervine system with the GhostDraft integration.

GhostDraft, an innovator in document automation and customer communications, provides users of Silvervine with the ability to create policy forms, memo's and other customer communications. GhostDraft software enables Silvervine customers to manage forms and document libraries independently, driving efficiency and bringing new products to market faster.

The integrated Silvervine and GhostDraft solution is fully supported by Silvervine, and will improve the ability of users to create their own policy documents. This includes declaration pages, schedules, forms and other customer communications.

Seamless Transition:

Silvervine users can continue using all existing documents created in Silvervine. Simply migrate existing documents to GhostDraft over time, while taking advantage of the advanced capabilities of GhostDraft for all new documents, ensuring a seamless transition to the new capabilities.

Current System Integration:

A current system integration comes standard as part of Silvervine and GhostDraft pricing package. This custom integration allows a new user of Silvervine to easily begin to develop documents. The integration will access and provide data from Silvervine to be available to GhostDraft for use on documents and forms.

Document Domain Model:

The integration layer that sits between these two systems is referred to as the Document Domain Model. An author in GhostDraft can use the standard Document Domain Models to reference data fields and tests when building documents or forms. The Document Domain Models which are available as part of this integration are:

- General Policy Information
- Personal Auto
- Personal Homeowners
- Motorcycle
- Watercraft
- Dwelling / Fire
- Claims
- General Memos

Create everything you need in-house to bring a new product to market faster, and do it all from inside the Silvervine system with the GhostDraft integration.

Using the Document Domain Models, users of Silvervine and GhostDraft can create many of the forms and documents required as part of any line of business. The document author can decide which Document Domain Models are needed to support their document requirements.

User-Driven Document Design:

Documents and forms can be designed and tested within GhostDraft Studio completely independent of Silvervine. This independence of development allows for the document development and testing to be completed in parallel to the Silvervine integration.

Documents Supported:

All types of documents and forms are supported by the GhostDraft integration with Silvervine. Batch, on-demand, and interactive documents can be created in GhostDraft and used within Silvervine through the integration. For interactive documents, GhostDraft allows users to create data capture pages, allowing additional data to be added when needed to create the document.

Additional Integration Benefits:

The standard pricing package includes custom integration of your current system and GhostDraft Studio training, a custom domain model, and an ISO Document Starter Set including a declaration page, schedule, form, and memo.

Pricing:

For pricing of the GhostDraft integration with Silvervine, please contact to Richard Armenta, National Account Executive at Silvervine.

Getting Started:

If you're interested in seeing how to use GhostDraft within Silvervine, contact Richard Armenta, National Account Executive at Silvervine, and he will schedule a demonstration for you and your team.

If you want to see how you would use GhostDraft for other apps, Richard can connect you with a GhostDraft representative.

Start creating everything you need in-house to bring a new product to market faster, and do it all from inside Silvervine. Gain even greater and simpler control over your documents to easily create and modify forms and other documents without the need for any technical expertise. Call Richard today to get started.
